Frank Goortani, TOGAF, PMP

Chief Technology Officer · AI-native product & platform leader

Aurora, Ontario, Canada (Remote) · frank.goortani@gmail.com · linkedin.com/in/frankgoortani · github.com/FrankGoortani · goortani.com

SUMMARY

Chief Technology Officer at FasterOutcomes, an AI platform for legal and healthcare workflows, since June 2025. Previously Solution Architect at Uber (2021–2025), where I built ELLE, an AI decision engine that cut manual privacy review time by roughly 70% across millions of decisions. 25 years building production systems for trust-sensitive domains — legal, healthcare, privacy and security, banking and insurance — the last four building production LLM systems. TOGAF, PMP.

SELECTED ACHIEVEMENTS

- **FasterOutcomes:** Specified and shipped an access model and admin console covering account types, role gating, entitlement inheritance and audit attribution for a regulated multi-tenant platform
- **FasterOutcomes:** Achieved and renewed SOC 2 Type 2 certification (certificate issued July 2026)
- **FasterOutcomes:** Executed the HIPAA BAA program across the entire production LLM provider chain — GCP, OpenAI and Anthropic — signing as the company's authorized representative, and enforced provider isolation in code rather than configuration so no production traffic can reach an uncovered vendor
- **Uber:** Built ELLE, an AI decision engine that automated triage and review of engineering review documents for privacy and security — adopted across multiple sub-disciplines and recognized with several internal awards
- **The Home Depot (Canada):** Led a team of 10+ onshore and 50+ offshore developers for homedepot.ca

CORE COMPETENCIES

Production LLM systems · RAG & hybrid retrieval · Agentic workflows · Multi-agent architecture · LLM evaluation (evals) · Prompt engineering · AI governance & guardrails · Human-in-the-loop design · Inference cost & latency management · Model routing & fallback · LangChain · LangGraph · CrewAI · MCP / FastMCP · Ollama · OpenAI · Anthropic Claude · Google Gemini / Vertex AI · Cohere · Mistral

EXPERIENCE

Chief Technology Officer — FasterOutcomes

June 2025 – Present · Remote

- Architected the platform and personally implemented the majority of it — backend, frontend, infrastructure and the AI layer — working AI-assisted at a throughput that kept a small senior team building product rather than plumbing
- Built production RAG and hybrid retrieval over legal and clinical documents on Elasticsearch and Pinecone, including a custom weighted Reciprocal Rank Fusion implementation replacing the framework default
- Ran root-cause investigation on model-behavior regressions in production, isolating a provider-side behavior change by direct-API replay rather than accepting an application-layer explanation
- Stood up production observability and on-call — Prometheus/Grafana, GCP alert policies as code, and PagerDuty rotation — and personally ran incident triage, root-causing and shipping fixes same-day
- Built an agentic engineering operating model: an internal Slack-native automation platform running scheduled and event-triggered AI coding tasks, plus a shared MCP server fleet and a reusable agent-skill library used across the engineering org
- Designed the platform's domain patterns: durable event-driven execution, vertical attributes that let one engine serve legal and clinical workflows without forking, schema-on-read structures the model discovers at runtime, and multi-tenant isolation with entitlement inheritance
- Designed a three-layer AI architecture that scales across verticals by manufacturing prompts rather than building per-industry code: unstructured extraction, playbook-driven structure discovery, and generative UI

Technologies: Next.js 15 (App Router) · React 18 · TypeScript 5 (strict) · Material-UI 6 · Tailwind CSS 3 · Zustand · JSON Forms · TipTap · Python 3.11 · FastAPI · Hypercorn (HTTP/2) · Temporal · Poetry · pytest

Solution Architect — Uber

January 2021 – June 2025 · Remote

Contract engagement via MatchPoint Solutions / BayRockLabs

- Reduced manual Technical Privacy review time by roughly 70%, across millions of decisions
- Delivered UDE (User Data Extraction) and DSAR (Data Subject Access Request) automation as mandates for the Security and Privacy organizations — GDPR/CCPA data-subject rights at platform scale
- Built and shipped 9+ enterprise privacy web applications for global compliance, security and legal teams
- Drove responsible AI practices and model governance with privacy, security and executive stakeholders

Technologies: Python · Go (YARPC, gRPC, Protocol Buffers) · LangChain · LangGraph · React 18 · TypeScript · Fusion.js · GraphQL · OpenAI · OpenSearch · Kafka · Cadence · MySQL · Docstore

AI Solutions Lead — MatchPoint Solutions / BayRockLabs

January 2021 – December 2025 · Remote

- GenAI lead architecting AI automation programs for enterprise clients, including OpenText (enterprise software)
- Delivered across ecommerce, manufacturing, accounting, legal and hospitality

Solution Architect — Canada Life

January 2019 – January 2021 · Toronto, Canada

- Built the in-house mobile development and architecture team from scratch — technical interviews, feature delivery, developer coaching and DevOps automation
- Built NEST, a fully automated component library for React and Vue with Storybook, Akamai, Jenkins and npm

Software Consultant — The Home Depot (Canada)

December 2017 – December 2019 · Toronto, Canada · contract

- Built the onshore mobile app team from scratch — technical hiring, coaching, and native iOS and Android feature architecture
- Built the mobile DevOps and CI/CD pipeline from scratch with Jenkins, scripting and Fastlane

Earlier experience: Manager, Software Development, TD Bank — Business Intelligence & Data Strategies (October 2014 – June 2015) · **Sr. Application Architect / Technical Lead**, TD Bank — Direct Channels (November 2013 – October 2014) · **Solution Architect**, CAA South Central Ontario (April 2012 – November 2013)

Earlier roles (2002–2012): Felcom Data Services (Jovian Group), Royal Persicus, Javid Educational Center, Faragam — application architecture, financial systems and enterprise reporting.

FOUNDER & PRODUCTS

Founded and ran VisionzLab (January 2010 – 2023), an independent product and consulting studio; shipped 12 products including FasterOutcomes, Counta AI, MirrorMe3D, frwrd.ai, Maktub, LastCall.

EDUCATION & CREDENTIALS

M.Sc. in Management, AmirKabir University of Technology (2003) · **B.Sc. in Computer Software Engineering**, AmirKabir University of Technology (2001)

AI Leadership learning path (2 courses) — OpenAI Academy, 2026 · **TOGAF 9.1 Certified** (2013) · **PMP (Project Management Professional)** (2013) · **Certified Data Scientist** (2015)
